NADX³ : NAD⁺ Longevity + Regenerative Repair System

NADX³ is an advanced cellular rejuvenation formula inspired by longevity science and designed to restore skin energy at the cellular level. By combining three powerful NAD⁺ precursors — NAD⁺, NMN, and NR — with regenerative ingredients such as PDRN (Hydrolyzed DNA), biomimetic peptides, hyaluronic acid, and antioxidant support including Vitamin C and Glutathione, NADX³ helps activate skin repair mechanisms, improve skin elasticity, and enhance overall skin vitality for a healthier, more youthful complexion.

The 3 Bioactive Systems of NADX³

Cellular Energy Activation of NAD⁺ + NMN + NR

Activates NAD⁺ metabolic pathways to support mitochondrial function and cellular metabolism, helping restore cellular energy and vitality.

NAD⁺ (Nicotinamide Adenine Dinucleotide)

Supports cellular energy metabolism and plays a key role in DNA repair and skin vitality.

NR (Nicotinamide Riboside)

A highly bioavailable NAD⁺ precursor that supports mitochondrial function and efficient NAD⁺ production.

NMN (Nicotinamide Mononucleotide)

A direct precursor that rapidly converts into NAD⁺ inside cells, helping boost cellular activity and regeneration.

NADX³ supports **comprehensive skin rejuvenation** through advanced regeneration and antioxidant protection, helping improve skin repair, elasticity, hydration, and overall skin radiance.

Skin Regeneration Support

Supports skin repair and renewal while stimulating collagen production, improving skin elasticity, and maintaining optimal hydration for healthier skin structure.

+ PDRN (Hydrolyzed DNA)

+ Hyaluronic Acid

+ Collagen

+ Peptide Complex

Brightening & Antioxidant Protection

Helps protect the skin from oxidative stress while improving skin tone, brightness, and overall radiance.

+ Glutathione

+ Vitamin C

+ Niacinamide
